

**LANE REGIONAL AIR POLLUTION AUTHORITY (LRAPA)
TITLE V OPERATING PERMIT ADDENDUM NO. 1**

Administrative Amendment Review Report

On June 14, 1999, Oregon Title V Operating Permit No. 208256 was renewed with revisions and issued to Trus Joist MacMillan in Eugene, Oregon. The revisions approved installation of a regenerative thermal oxidizer (RTO) on the facility veneer dryers to allow increased dryer production rates while complying with opacity limits. Dryer production in the 12-month period immediately preceding the required compliance test on the RTO had been restricted to lower than 'normal maximum' to ensure compliance with the opacity limits while the control equipment was installed. Condition 25.b as written is considered a typographical error in requiring the compliance test at a production rate that could not be defined.
