BASIC
AIR CONTAMINANT DISCHARGE PERMIT
Lane Regional Air Protection Agency
1010 Main Street
Springfield, OR 97477
(541) 736-1056

This permit is being issued in accordance with the provisions of LRAPA's Rules and Regulations and based on the land use compatibility findings included in the permit record.

ISSUED TO: Griffith Rubber Mills
P.O. Box 2783
Eugene, OR 97402

INFORMATION RELIED UPON:
Application No.: 62591, 62584
Date Received: 02/21/17, 03/08/17

PLANT SITE LOCATION: 2631 West 5th Avenue
Eugene, OR 97402

LAND USE COMPATIBILITY STATEMENT:
Approving Authority: City of Eugene
Approval Date: 03/07/17

ISSUED BY THE LANE REGIONAL AIR PROTECTION AGENCY

Merlyn L. Hough, Director
Dated May 9, 2017

Source(s) Permitted to Discharge Air Contaminants (LRAPA Section 37-0020):

1.0 STATEMENT OF PURPOSE

1.1 Permitted Activities

The permittee is allowed to discharge air contaminants from processes and activities related to the air contaminant source(s) listed on the first page of this permit until this permit expires, is modified, revoked or rescinded as long as the permittee complies with the conditions of this permit.

2.0 GENERAL EMISSION STANDARDS AND LIMITS

2.1 Visible emission limits

Emissions from any air contaminant source must not equal or exceed 20% opacity as a six-minute block average. "Opacity" means the degree to which an emission reduces transmission of light and obscures the view of an object in the background.

2.2 Particulate Matter Weight Standards

Emissions from any air contaminant source must not exceed 0.14 grain per dry standard cubic foot of exhaust gas, adjusted to 50 percent excess air or calculated to 12 percent carbon dioxide.

2.3 Particulate Matter Fallout

The permittee must not cause or permit the emission of any particulate matter larger than 250 microns in size at sufficient duration or quantity, as to create an observable deposition upon the real property of another person. LRAPA will verify that the deposition exists and will notify the permittee that the deposition must be controlled.

2.4 Nuisance and Odors

The permittee must not cause or allow air contaminants from any source to cause a nuisance. Nuisance conditions will be verified by LRAPA personnel.

2.5 Other Regulations

In addition to the specific requirements listed in this permit, the permittee must comply with all other legal requirements enforceable by LRAPA.
3.0 RECORDKEEPING AND REPORTING REQUIREMENTS

3.1 Records
The permittee must maintain records of the information identified in Condition 3.2 for at least 5 years from the date of the record.

3.2 Reports
The permittee is required to report to LRAPA by February 15th of each year the following:

a) amount of natural gas (cubic feet) burned in the boiler(s) during the previous calendar year, and

b) The coating and solvent usage amounts (pounds) by type (e.g., “Chemlok 252x”, “Thinner 225”, etc.).

3.3 Permit Renewal
An application to renew the permit is due 30 days prior to the expiration date.

3.4 Construction or Modification Notices
The permittee must notify LRAPA before adding new or modifying existing equipment to the extent that process equipment is substantially changed or added to, or emissions are significantly changed or increased.

3.5 Notice of Change of Ownership or Company Name
The permittee must promptly notify LRAPA of any change of mailing address, company name, or plant ownership. The permit will expire 60 days after a change in the legal entity owning/operating the facility unless application, with appropriate fees, is made to transfer the permit to the new entity.

3.6 Where to Send Reports and Notices
The reports and notices, with the permit number prominently displayed, must be sent to the LRAPA office identified on the cover page of the permit.

4.0 FEES

4.1 Fees
The Annual Fee specified in LRAPA Section 37-0020, Table 2, Part 2 for a Basic ACDP is due by December 1st of each year this permit is in effect. An invoice indicating the amount, as determined by LRAPA regulations, will be mailed prior to the above date.
5.0 GENERAL CONDITIONS

5.1 Masking of Emissions
The permittee must not cause or permit the installation of any device or use any means designed to mask the emissions of an air contaminant that causes or is likely to cause detriment to health, safety, or welfare of any person or otherwise violate any other regulation or requirement.

5.2 Open Burning
The permittee may not conduct any open burning except as allowed by LRAPA Title 47.

5.3 Asbestos
All activities involving asbestos-containing materials, including, but not limited to, demolition, renovation, repair, construction, and maintenance must be performed by persons certified for asbestos abatement projects. Accumulation of asbestos containing material is prohibited. If you have asbestos questions, contact the LRAPA office identified below.

5.4 Permit Availability
The permittee must have a copy of the permit available at all times.

5.5 LRAPA Inspections
The permittee must allow the LRAPA’s representatives access to the plant site and pertinent records at all reasonable times for the purposes of performing inspections, surveys, collecting samples, obtaining data, reviewing and copying air contaminant emissions discharge records and conducting all necessary functions related to this permit in accordance with ORS 468.095.

5.6 Legal Disclaimers
The issuance of this permit does not convey any property rights in either real or personal property, or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor any infringement of federal, state, or local laws or regulations.

5.7 Permit Revocation
This permit is subject to revocation for cause as provided in LRAPA Section 37-0082.

5.8 LRAPA Contact
Call the LRAPA office in Springfield at (541) 736-1056.
1. The proposed permit is a new permit for an existing facility. The facility performs rubber extrusion, rubber splicing, rubber molding, and rubber die cutting at its 2631 West 5th Avenue location in Springfield. A 4.2 MMBtu/hr natural gas-fired boiler supplies heat and steam to the process. Other emission sources are from adhesive and solvent usage.

2. A review of the Eugene Toxics Right to Know (ETRTK) database by LRAPA staff revealed the facility reported actual emissions of approximately one (1) ton per year of air toxics for 2015. Their previous ETRTK reporting year was 2009.

3. This facility qualifies for a Basic ACDP because the actual emissions of volatile organic compounds (VOCs) and hazardous air pollutants (HAPs) are greater than one (1) ton per year.

4. Actual emissions from 2016 are attached to this review report. VOC emission estimates for 2016 are 2.4 tons/year; HAP emission estimates are 2.1 tons/year. The gas-fired boiler emits very small amounts of other pollutants.

5. The source is not subject to the requirements specified in the area source NESHAP for Industrial, Commercial, and Institutional Boilers (40 CFR 63 Subpart JJJJJJ) due to the operation of a natural gas boiler as defined by 40 CFR 63.11195(e).

6. The facility is located in an attainment area for all pollutants.

7. LRAPA has determined that sources that qualify for a Basic ACDP will not have significant emissions. In most cases the emission will not exceed 5 tons of PM or
PM$_{10}$ or 10 tons of any other pollutant. Therefore, the Basic ACDP does not include Plant Site Emission Limits and it is not necessary to estimate emissions for each individual source.

8. The facility is required to record and report annually by February 15th the amount of natural gas (cubic feet) burned in the boiler along with the solvent and chemical usage by type. The reported amounts will be used by LRAPA to estimate actual emission and confirm that the facility qualifies for the Basic ACDP.

9. Pursuant to LRAPA Section 37-0056-4, issuance of a new or renewed Basic Air Contaminant Discharge Permit requires public notice in accordance with LRAPA Section 31-0030-3.A. Therefore, there will be no prior notice or public participation. However, LRAPA will maintain a list of all permit actions processed under Category I and make the list available for public review.

4940 hours per year

---

One natural gas-fired boiler: maximum design rate of 4.2 million BTU/hr

Emission factors are from DEQ AQ-EF05 for small uncontrolled boilers

The boiler is started at 0300 on Mondays and is shut down at 0200 on Fridays.
