Are you going to demo your mobile home? **STOP!**

**READ THIS FIRST!**

If you have any questions, please contact the Lane Regional Air Protection Agency 541-736-1056 asbestos@lrapa.org

1. **SURVEY YOUR HOME.**
   Check for asbestos first. You need to hire an accredited asbestos survey inspector to sample and test your home.

2. **PROPER ABATEMENT (REMOVAL)**
   Did they find asbestos in your home? Now you will need to hire a licensed asbestos abatement contractor to remove it for you.

3. **PROPER DISPOSAL**
   The licensed asbestos abatement contractor will handle it for you! Do NOT dump it or burn it illegally.

4. **AVOID FINES & CITATIONS!**
   Follow the rules, hire a licensed asbestos abatement contractor to help, and you can avoid HEFTY fines!

---

**CHECK BEFORE YOU WRECK**

PLAN AHEAD
PROTECT YOURSELF
KNOW THE LAW

WHO?
1. You: As the homeowner, you are responsible for proper demolition.
2. Accredited Asbestos Inspector: Survey and test your home for asbestos.
3. Licensed Asbestos Abatement Contractor: Remove, and dispose!
4. Land Owner/Mobile Park Owner: Could also be held responsible for proper demolition.

WHAT?
ASBESTOS: Mineral that is used in many building materials for its heat-resistant properties. Unfortunately, asbestos has been found to be extremely dangerous to human health. It must be handled by professionals!

WHERE?
Some common areas where asbestos can be found:
- Insulation
- Window putty
- Spackling
- Flooring materials
- Roofing shingles
- Ceilings
- Sheetrock/Drywall
- Pipes
- And more!

Asbestos is still used in many building materials. You MUST hire professionals to survey and abate your home before you tear it down! Surveys may cost a few hundred dollars but save you from fines which could cost you...

THOUSANDS OF DOLLARS

WHEN?
BEFORE you do any demolition! Call an accredited asbestos inspector.
If you have any questions, call LRAPA or e-mail us:
(541) 736-1056 asbestos@lrapa.org

WHY?
Asbestos is found in many different materials around your house. During demolition, the asbestos fibers can become airborne and you could breathe them into your lungs. Asbestos exposure is known to cause serious health problems such as mesothelioma, lung cancer, and asbestosis.

CHECK. BEFORE YOU WRECK.
